As malicious cyber threats continue to present a growing risk to economic and national security, it is more critical than ever that the private sector engage global policymakers and highlight critical challenges in cyber policy.

Mission:
The Aspen Institute’s Cyber Risk Council has been designed as a vital platform for businesses and associations of all sizes, from every commercial sector, to come together to share and discuss cybersecurity policy, best practices, and market-based solutions.

Through both public and private convenings throughout the year, the Council brings together thoughtful, progressive, and dynamic companies and organizations who recognize both the opportunities of the wired world and the potential threats it poses to our way of life. Together, we believe we can help ensure that the internet and technology remains a powerful—and positive—force on our economy and our future.

Key to our focus on risk management and protecting innovation will be highlighting important voices and relevant information on the most pressing security threats and topics facing modern organizational leaders, helping companies and associations understand the threat and policy landscape in one of the most fast-evolving fields.

Membership:
The Council will be made up of all critical infrastructure sectors. Council membership is for an entire organization, allowing multiple staff or personnel to rotate attending events throughout the year. The Council is Chaired by Jane Holl Lute, former Deputy Secretary at DHS and President and CEO of SICPA North America.
