Confronting the Youth Sports Concussion Crisis:
A Central Role for Responsible Local Enforcement of Playing Rules

IV. CONCLUSION
I. INTRODUCTION

By late 1905, college football was at a crossroads. Raw violence and unremitting bloodshed had stalked the gridiron for years. In that season alone, eighteen players would be killed and scores more would be seriously injured in intercollegiate games.\(^1\) As Americans cringed, calls to abolish the sport as barbaric grew louder because games and death did not mix on college campuses.\(^2\)

The specter of death in college football was serious business at the dawn of the 20th century. A national professional league was still a few years away, so the collegiate game was the most prominent football in America. Even one on-the-field death among several thousand college football players today would attract national attention; because far fewer collegians played football in 1905, 18 deaths in a single season was an astounding percentage of all players, a grim toll unlikely to abate without meaningful changes to the rules of the game.

Most of the deaths were from what would be diagnosed today as multiple concussions, skull fractures, or other traumatic brain injury.\(^3\) At the turn of the century, some intercollegiate football players wore skimpily protective equipment and soft leather helmets without face guards, but helmets did not become

---

3. Id.
mandatory in National Collegiate Athletic Association (NCAA) play until 1939.\textsuperscript{4} Game photos from the period show that most players went helmetless,\textsuperscript{5} even though college football had degenerated into “a game of mass interference which leveled the defense. Line play deteriorated to brute force where linemen slugged one another and the ball carrier was pulled and pushed into this mass of humanity.”\textsuperscript{6}

Some colleges, notably Columbia and Northwestern, reacted to the carnage by eliminating their football programs altogether.\textsuperscript{7} Disgusted by the unrelenting bloodshed, President Theodore Roosevelt grew worried that more colleges would follow suit (including his alma mater, Harvard).\textsuperscript{8}

Roosevelt was a vigorous sportsman who respected athletic competition, indeed one of the most athletic Presidents we have ever had.\textsuperscript{9} He was also a “gridiron enthusiast” who closely followed Harvard’s eleven, which he might have joined as an undergraduate little more than 25 years earlier but for his nearsightedness.\textsuperscript{10} He embraced football for manifesting rugged Americanism just a few years after the U.S. Census Bureau inspired national soul-searching by

\end{itemize}
announcing the closing of the frontier in 1890.\textsuperscript{11} When he charged San Juan Hill during the Spanish-American War, his Rough Riders included former college football players who won his respect.\textsuperscript{12}

“To borrow a simile from the football field,” Roosevelt said in 1897, “we believe that men must play fair, but that there must be no shirking, and that the success can only come to the player who ‘hits the line hard.’”\textsuperscript{13} From the White House, he wrote to his son, Theodore, Jr., who played on Harvard’s freshman team: “I am delighted to have you play football. I believe in rough, manly sports.”\textsuperscript{14}

In October of 1905, with “football staring hard at the prospect of demise,”\textsuperscript{15} President Roosevelt summoned the head coach and alumni committee head from each of the “Big Three” collegiate gridiron powers -- Harvard, Yale and Princeton -- to convene at the White House and explore ways to maintain the game’s distinctiveness as a collision sport, yet stem its unrestrained brutality.\textsuperscript{16}

Barely a month before the college football delegations arrived, Roosevelt had mediated an end to the Russo-Japanese War, an effort that earned him the Nobel

Peace Prize.\textsuperscript{17} With participants considerably less hostile to one another than warring nations, the White House football summit led to safety-based rules changes that would soon make sudden deaths from play on the field remnants of the past.\textsuperscript{18} The summit also led to creation of the NCAA, the national governing body that would oversee enforcement of playing rules by member colleges and universities.\textsuperscript{19}

Safety-based rules changes did not doom public enthusiasm for football. Quite the contrary. College and professional football remain the nation’s most popular spectator sports today,\textsuperscript{20} and the highest award the NCAA bestows on an individual is the Theodore Roosevelt Award, honoring the man whose presidential initiative saved the game from itself.\textsuperscript{21}

\* \* \* \*

Without suggesting intervention by Congress or any state legislature, President Roosevelt confronted college football’s brain injury crisis by advocating national rules changes that conferences, coaches and referees would administer responsibly in local games. Injury prevention was central to the President’s formula

\textsuperscript{17} HENRY F. PRINGLE, THEODORE ROOSEVELT 185-96 (1956); Edmund Morris, THEODORE REX 131-37, 150-69; THEODORE ROOSEVELT: AN AUTOBIOGRAPHY 555-58 (1913).

\textsuperscript{19} Joseph N. Crowley, \textit{supra} note 15, at 43-44.
because mere reaction to serious injury came too late, only after the player and his family suffered loss that could not be undone.

Today the sports world faces a similar crisis from an epidemic22 of serious and often permanent brain injury. Today’s crisis -- “the predominant youth sports safety issue of the 21st century”23 -- concerns concussions, a form of traumatic brain injury from externally inflicted trauma.24 “[H]ead trauma in sports is a topic that leads nightly newscasts and is debated at every level of amateur and professional sports.”25 Concussions produce “contact sports' nastiest byproducts,” with “long-term effects . . . [that] are proving to be absolutely terrifying.”26

Until a few years ago, the national spotlight shined most brightly on concussions suffered by professional athletes, particularly football and ice hockey players. As neurosurgeon William P. Meehan reports, however, we know now that “concussion is a risk in almost any sport.”27 We also know, as Time reports, that “concussions are an

22 See, e.g., Linda Carroll & David Rosner, supra note 2.
27 William Paul Meehan III, supra note 23, at 37; see also Michael W. Kirkwood et al., Pediatric Sport-Related Concussion: A Review of the Clinical Management of
alarmingly commonplace injury, particularly among kids and most particularly among active, athletic ones.”28 Whether or not the victim loses consciousness,29 a concussion at any age “can affect memory, judgment, reflexes, speech, balance, and muscle coordination and can result in serious complications, such as swelling, bruising, or bleeding of the brain, which can cause permanent disability or death.”30

Today’s concussion crisis31 summons a range of preventive strategies, including the one President Roosevelt prescribed for college football in 1905 – public education about profound safety risks, ongoing review of national playing rules based on new learning, and responsible local implementation of these rules in practice sessions and games. Mere reaction to a player’s brain injury cannot undo prior damage.

This article concerns the effect of playing rules on efforts to confront today’s concussion crisis in “youth sports.” The term “youth sports” covers the two primary sources of organized athletics for children – community leagues and teams

29 Robert Cantu & Mark Hyman, supra note 25, at 106-07 (95% of victims who suffer concussions do not lose consciousness); James P. Kelly, Traumatic Brain Injury and Concussion in Sports, 282 J. AM. MED. ASS`N 989, 990 (1999) (“Concussion . . . may or may not involve loss of consciousness”).

31 Linda Carroll & David Rosner, supra note 2.
conducted by parents in private associations or clubs, or by public parks and recreation departments; and interscholastic leagues conducted by public and private secondary schools.

I remain awed by the sheer quality and quantity of research and commentary generated in recent years by prominent medical professionals seeking to stimulate public awareness of sports-related brain injuries in children. Without venturing into a profession in which I lack training, I seek to apply this learning from my vantage as a lawyer, and as a youth hockey coach concerned for more than 40 years about player safety. For ten of these years, I also served as president of a youth hockey program and thus designed and helped supervise safety measures taken by other volunteer coaches.

President Roosevelt sought to save football, and not eradicate it. I recognize that participation in sports inevitably brings risk of injury at any age, and that contact and collision sports depend on a measure of controlled violence within the rules of the game. We can significantly reduce the risk of childhood sports-related concussions and other brain trauma, however, by periodically adjusting safety-based playing rules in light of medical learning, and then by assuring their responsible enforcement by coaches, league administrators, game officials and parents who remain committed to sportsmanship and mutual respect in vibrant local games.
Now that children’s spontaneous sandlot play has yielded to organized youth sports programs conducted by adults,\textsuperscript{32} injury prevention grounded in fidelity to the rules of the game is more than an adult challenge and opportunity. This central injury-prevention strategy is an adult responsibility because “every hit to the head leaves a mark, or a legacy, on a child’s future.”\textsuperscript{33}

Part II of this article discusses rules-based prevention of concussions and other traumatic brain injury in youth sports, a proactive stance that the National Institutes of Health says holds “great promise.”\textsuperscript{34} Primary responsibility for the rules rests with national youth sports governing bodies (USA Soccer, USA Hockey and others), and with the state high school activities associations that oversee the interscholastic sports programs conducted by their member secondary schools. Rulemaking remains a work in progress, but national and state rulemakers have proved increasingly responsive to parents, medical professionals, legislators and similar voices who have advocated periodic review.

National and state rulemaking, however, does not end the story because youth games are played from coast to coast on fields and other local venues largely beyond the direct day-to-day supervision of national and state governing bodies. Part II explains why the rules of the game stand the best chance of protecting

\textsuperscript{34} NIH Consensus Dev. Panel, \textit{supra} note 24, at 9.
players when coaches, league administrators, game officials and parents enforce the rules responsibly.

Part II concludes by discussing how local adult irresponsibility, particularly when passion to win overcomes reason in the heat of competition, can neutralize national and state safety-based playing rules and put young athletes in harm’s way. These rules resemble an impressive building, which may take years to design and construct with care, but which can be imploded locally in moments.

Part III discusses the role of legal constraints in the quest for greater safety from concussions in youth sports. Most states have taken a giant step forward since 2009 by enacting concussion legislation that, while not displacing safety-based review and enforcement of playing rules, holds potential to make life better for the nation’s youngest athletes who play under those rules. Parents, coaches and players generally must receive information and education about the dangers of concussions and when to suspect that a player may have suffered one. When a player is suspected to have suffered possible concussive injury, teams and coaches must immediately remove the player from practice sessions and games until the player secures medical clearance to return to action.

Thus far, however, private litigation has played comparatively little direct role in preventing youth league concussions. The specter of lawsuits by injured players might influence and indeed accelerate safety initiatives by stimulating the sensibilities of rulemakers and other concerned adults, by jeopardizing the availability of insurance at favorable rates, or by leaving individual parents
reluctant to enroll their children. These prospects seem already to have moved
tional and state governing bodies toward greater safety measures, but lawsuits in
large numbers have not yet been reported in youth sports.\footnote{See infra note 53 and accompanying text (discussing class action lawsuit by more than 2,000 former National Football league players against the NFL arising out of the concussion crisis).}

Recovery in an injured player’s tort suit against governing bodies, leagues
and coaches can help ease the frequently substantial financial burdens of short
term and long term care following a concussion or other traumatic brain injury.
Recovery, however, comes only after the player has suffered immediate and
sometimes permanent damage. In practice sessions and games alike, youth
leaguers are best protected from concussions and other serious injury with proactive
prevention, rather than essentially reactive tort law.

\section*{II. PREVENTING YOUTH SPORTS CONCUSSIONS}

Emphasizing injury prevention initiatives in youth sports plows no new
ground because prevention initiatives in the schools and the greater community
already seek to protect children from an array of potential dangers, such as
delinquency, bullying and school violence.\footnote{See, e.g., Douglas E. Abrams, \textit{A Coordinated Public Response to School Bullying}, in \textsc{Our Promise: Achieving Educational Equality for America’s Children} 399, 410-12 (Maurice R. Dyson & Daniel B. Weddle eds., 2009).} Because parents in their own homes
also strive to prevent childhood injuries (including ones from sports and games), it
seems natural to contemplate injury prevention initiatives in the organized sports
their children play in the community.
Prevention initiatives measure success by rates of reduction rather than by total elimination of targeted conduct. The nation cannot eliminate all delinquency, bullying, or school violence -- or all youth sports concussions -- but parents and safety advocates can strive for significant reduction rather than tolerate continued high rates of adverse outcomes controllable through due care.\textsuperscript{37} As Benjamin Franklin said, “an ounce of prevention is worth a pound of cure.”\textsuperscript{38}

A. The Contemporary Sports Concussion Crisis

1. Professional sports

When parents first enroll a child in a youth sports program, their perceptions about sports typically come almost entirely from having followed professional games.\textsuperscript{39} “[T]hrough their pervasive presence in the media,” says the U.S. Court of Appeals for the Sixth Circuit, “sports . . . celebrities have come to symbolize certain ideas and values in our society and have become valuable means of expression in our culture.”\textsuperscript{40} Amid the unprecedented saturation of professional sports in the broadcast and print media and more recently on the Internet,\textsuperscript{41} the impetus toward concussion prevention in youth sports thus reflects adult reactions to the well-publicized concussion crisis that besets several professional sports.

\textsuperscript{37} Id. at 410-12.
\textsuperscript{39} Douglas E. Abrams, supra note 32, at 273.
\textsuperscript{40} ETW Corp. v. Jireh Publishing, Inc., 332 F.3d 915, 937-38 (6th Cir. 2003).
The Minnesota Twins’ all-star first baseman Justin Morneau, the American League’s Most Valuable Player in 2006, acknowledged these reactions when he returned to the lineup this season after being sidelined with his second concussion. “If anything good comes” from his prolonged recovery, said Morneau, “it’s the fact that if parents see us big guys, professional athletes, missing good chunks of time, they’re going to take it seriously and not rush their high school kids back out there to play a football game.”

Traumatic brain injury in sports has been called a “silent epidemic,” partly because until recently its potentially devastating effects had received only relatively moderate attention from medical researchers amid concern for other neurological conditions that afflict the general population such as Alzheimer’s disease and stroke. In the nation’s “sports dominated culture,” the silence was broken by dramatic media accounts about professional athletes in distress, often years after their retirements from the game. The accounts typically chronicled not the immediate disability and death that stained college football by 1905, but lingering physical incapacity, dementia and early death attributable to concussions and other brain trauma, particularly in contact and collision sports.

---

42 Tyler Kepner, Feeling Right, Finally, N.Y. TIMES, Aug. 5, 2012, at 10 (quoting Morneau).
43 James P. Kelly, supra note 29; see also, e.g., Philipp R. Aldana & Mark S. Dias, Are You Ready for the “Silent Epidemic”?, 32 AAP NEWS 1 (July 1, 2011); Alan Siegel, supra note 26 (silence may also be attributable to continuing reluctance of many former professional players to acknowledge publicly the likelihood of future deterioration).
44 Butts v. National Collegiate Athletic Ass’n, 751 F.2d 609, 612 (3d Cir. 1984) (citation omitted).
It might seem odd that so much of the nation’s early attention on traumatic brain injuries focused primarily on the pros – a few thousand of the nation’s elite adult athletes – and not on youth leaguers, the estimated 30 to 35 million boys and girls who play each year. Hefty youth sports enrollments comprise nearly half the children in America, and nearly every child has some experience with organized sports – and thus some exposure to serious injury – before turning eighteen.

Odd or not, the headlines first spotlighted the pros. Knowing that they have suffered multiple concussions in contact or collision sports, some professional athletes or their families sensing the irreversible damage have donated their brains to the Sports Legacy Institute in Boston for post-mortem examination. Examinations of a few deceased football and hockey players’ brains have already shown that most suffered from chronic traumatic encephalopathy (CTE), a progressive degenerative brain disease caused by repeated blows to the head,

---

47 See, e.g., Bari Katz Stryer et al., A Developmental Overview of Child and Youth Sports in Society, 7 Child & Adolesc. Psychiatr. Cl. N. Am. 697, 697 (1998); Having Fun is a High Priority, USA Today, Sept. 10, 1990, at 14C (estimating that only 1 in 20 children has played no organized sport).

including concussions. CTE is linked to behavioral changes, dementia, and premature death. Indeed, football players with CTE may suffer the same type of brain damage as Alzheimer's patients, or as combat veterans who endured bomb blasts in the Iraq and Afghanistan wars.

More than 2,000 former National Football League players have also attracted national attention by filing a class action alleging that the league knew, or should have known, about the lifelong dangers of concussions and other head trauma. Some former pros have retired early from collision or contact sports such as football and hockey for fear that further concussions would haunt them later in life. A few former pros have died young from ailments or overdoses of painkillers evidently traceable to traumatic brain injury, and others have committed suicide in suspected attempts to escape progressing debilitation.

What does the looming concussion crisis bode for the future of professional football (and thus perhaps for the future of youth football, which thrives on the pro game’s popularity)? Despite persistently high rates of serious injury, writer James A. Michener found in 1976 that “there is no cry to end football, nor will there be, because every society decides what it is willing to pay for its entertainment.”

Concluded Michener, “Football is the American form of violence . . . because we have given it our moral sanction.”

Journalist Buzz Bissinger (author of the acclaimed Friday Night Lights high school football chronicle) may be right that raw violence defines football’s popularity among Americans. “Take [violence] away,” he writes, “and the game will be nothing.” Columnist George F. Will similarly wrote recently about the “fiction that football can be fixed and still resemble the game fans relish.”

NOWINSKI, HEAD GAMES: FOOTBALL’S CONCUSSION CRISIS FROM THE NFL TO YOUTH LEAGUES 71-75 (2007) (NFL Hall of Famer Mike Webster died of heart failure at age 50, and post-mortem brain examination found evidence of CTE); Alan Schwartz, Hockey Brawler Paid Price, With Brain Trauma, N.Y. TIMES, Mar. 3, 2011, at A1 (NHL “enforcer” Bob Probert died of heart failure at 45, found to suffer from CTE).

SUN-TIMES, May 8, 2012, at 63 (Junior Seau, 43-year-old FNL star and likely future Hall of Famer); Alan Schwartz, Duerson Lawsuit Says N.F.L Ignored Concussion Risks, N.Y. TIMES, Feb. 24, 2012, at 15 (50-year-old for NFL player Dave Duerson committed suicide with gunshot wound to chest and requested that his brain be studied for severe damage).

57 JAMES A. MICHERNER, SPORTS IN AMERICA 85 (1976).

58 Id.

Other commentators have suggested, however, that public unease about concussions and other traumatic brain injury may lead many fans to spurn NFL games between players they know are destined for early debilitation.\(^{62}\) Conjuring images of the crisis that afflicted college football when President Roosevelt interceded in 1905, the *New Yorker’s* Malcolm Gladwell likens football to dogfighting.\(^{63}\) Accusing the NFL of “chewing up players like a meat grinder,” former *New York Times* columnist Bob Herbert says that “[w]ith the carnage

against-bonuses-for-injuring-players.html (“[W]e watch football . . . [b]ecause it is barbaric and terrifying and sick. Because we love good hits and kamikaze safety blitzes and a quarterback sitting on the field after a sack with visions of Tweety Bird dancing in his brain.”).

increasingly emerging from the shadows, there is no guarantee that football's magical hold on the public will last.”  

To promote effective responses to the youth sports concussion crisis, we need not choose sides in prognoses about the NFL’s future. If the commentators predicting storm clouds ahead for the pro game prove to be correct, however, any significant loss of popularity would likely affect the youth game’s vitality in many communities.

2. Youth sports

The American Academy of Pediatrics calls sports-related concussions “a common problem for children and adolescents.” The professional and youth sports concussion crises may share similarities, but tolerance for serious injury should be considerably lower in children’s games than in the pros.

Professional athletes are well compensated adults employed by major corporations in billion-dollar businesses. The law’s conception of personal autonomy generally grants competent adults considerable right to decide about

64 Bob Herbert, The Sport Needs to Change, N.Y. TIMES, Mar. 15, 2011, at A5; see also, e.g., Tim Sullivan, Love of Football Just Might Not Be Enough to Keep It Viable, SAN DIEGO UNION-TRIB., May 28, 2012, at D1 (unless the NFL meets the concussion crisis with meaningful rules changes, “football will eventually be deemed so dangerous that that its participants will progressively reflect much the same desperate demographic as boxing”); Jake Simpson, Will Concussions Kill Football?, THE ATLANTIC, Sept. 21, 2010 (“If the NFL, NCAA, and other football bodies do not take serious action right now to combat the constant, destructive head trauma that is as much a football staple as the extra point, the sport could face a massive decline in popularity and relevance over the next 20 to 30 years.”).

their own health care and personal safety in the absence of harm to others.\textsuperscript{67} Former National Hockey League Hall of Fame goalie Ken Dryden observes correctly that “[f]or players or former players, owners, managers, coaches, doctors and team doctors, league executives, lawyers, agents, the media, players’ wives, partners and families, it’s no longer possible not to know and not to be afraid, unless we willfully close our eyes.”\textsuperscript{68} As the pros bargain collectively with team owners about safety measures and other terms of employment, however, these adults may determine for themselves how much risk of injury they wish to tolerate.

Children, however, play sports without lucrative contracts and nationwide audiences of millions as they seek to have fun, win games and develop their skills.\textsuperscript{69} Christopher Nowinski, co-director of the Sports Legacy Institute, puts it well: “What’s good television is not necessarily good for kids. They’re not little men. They’re children.”\textsuperscript{70} Few youth leaguers progress to the Division I collegiate ranks, and fewer still progress to the pros and receive a single paycheck for their play.\textsuperscript{71}

\textsuperscript{67} See, e.g., Prince v. Massachusetts, 321 U.S. 158, 170 (1944) (“Parents may be free to become martyrs themselves. But it does not follow they are free, in identical circumstances, to make martyrs of their children before they have reached the age of full and legal discretion when they can make that choice for themselves.”).

\textsuperscript{68} Ken Dryden, \textit{Head Shots Should Be History}, GLOBE & MAIL (Canada), Mar. 12, 2011, at F5.

\textsuperscript{69} See, e.g., \textsc{James A. Michener}, \textit{supra} note 57, at 10 (“If the game isn’t fun, it has lost at least half its justification”); Ron Borges, \textit{Counting Cost to Children}, BOSTON HERALD, Feb. 4, 2012, at 42 (quoting Christopher Nowinski, co-founder of the Sports Legacy Institute: “What’s good television is not necessarily good for kids. They’re not little men. They’re children.”).

\textsuperscript{71} \textit{Estimated Probability of Competing in Athletics Beyond the High School Interscholastic Level},
For most parents, youth sports seeks to provide children with memories during a lifetime of good health, as free as possible from the chronic effects of childhood injury.\textsuperscript{72}

The numbers define the imposing contours of the youth sports crisis, with concussions representing an estimated 8.9\% of high school athletic injuries.\textsuperscript{73} “It is commonly reported that 300,000 sport-related concussions occur each year, although it was estimated in a recent review that up to 3.8 million recreation- and sport-related concussions occur annually in the United States. . . . Because of the large numbers of participants in youth and high school sports, concussions in the pediatric and adolescent age groups account for the majority of sport-related concussions.”\textsuperscript{74}

The pediatric concussion crisis reaches more sports than traditionally imagined. As Dr. Stanley Herring told a congressional committee, the crisis “is not a football issue. It’s not a boy sport issue.”\textsuperscript{75} The American Academy of Pediatrics finds that “[a]mong the more commonly played high school sports, “football and ice

\textsuperscript{72} See, e.g., Jonathan Tamari, supra note 62, at E9 (quoting neurosurgeon Robert Cantu: “Individuals who aren’t being paid need to be informed of the risk they’re taking and then decide whether they want to take those risks.”).

\textsuperscript{73} Mark E. Halstead & Kevin D. Walter, Clinical Report—Sport-Related Concussion in Children and Adolescents, 126 PEDIATRICS 597, 599 (2010).

\textsuperscript{74} Id. at 598-99; see also, e.g., William P. Meehan & Richard G. Bachur, supra note 65, at 114 (“the majority of at-risk athletes are children,” and “children are particularly susceptible to” sport-related concussions).

\textsuperscript{75} Student Athlete Concussions: Hearing Before the H. Educ. and Labor Comm., Sept. 23, 2010 (statement of Dr. Stanley Herring, clinical professor, Dep’t of Rehabilitative Medicine, Orthopedics and Sports Medicine and Neurological Surgery, Univ. of Wash.).
hockey have the highest incidence of concussion, followed by soccer, wrestling, basketball, field hockey, baseball, softball, and volleyball.\textsuperscript{76} The concussion rate in girls’ soccer is almost as high as it is in boys’ football, and girls have higher rates of reported concussions than boys in similar sports and may experience more difficulty than boys in recovering from concussions.\textsuperscript{77}

The hefty numbers and broad reach likely shroud an even more profound crisis because “underreporting of concussions exists in all sports and is a special challenge in a few sports such as football and ice hockey.”\textsuperscript{78} Not only do national and state injury databases provide only inexact measures of concussive injuries,\textsuperscript{79} but players, parents and coaches often do not recognize concussive symptoms.\textsuperscript{80}

\textsuperscript{80} See, e.g., Mark E. Halstead & Kevin D. Walter, supra note 73, at 605-06; Jack Kelly, What Dangers Await the Young Athlete?, PITTSBURGH POST-GAZETTE, June 4, 2012, at C1.
Many youth leaguers (particularly boys) also remain reluctant to report head injuries to their elders.\textsuperscript{81} The “shake it off and tough it out” ethic – a manifestation of children’s notions that they are invincible\textsuperscript{82} -- encourages a “code of silence” among young athletes who fear that reporting may cause them to lose playing time, lose their position to a teammate, lose permission to play at all, incur disfavor from coaches, or let their team down.\textsuperscript{83}

“Sometimes we have ignored concussions in younger athletes, and we now realize those athletes are most significantly affected,” says Dr. Daniel Kraft, director of Riley Hospital for Children’s Sports Medicine at Indiana University Health.\textsuperscript{84} “Young athletes pose a unique challenge,” add two other researchers, “because their brains are still developing and may be more susceptible to the effects of a concussion.”\textsuperscript{85}

\textsuperscript{85} Mark E. Halstead & Kevin D. Walter, supra note 73, at 597; see also, e.g., Michael W. Kirkwood et al., supra note 27, at 1359, 1367 (“younger athletes may respond more poorly” than adults to brain injuries); Paul McCrory et al., Can We Manage Sport Related Concussion in Children the Same as in Adults?, 38 BRIT. J. SPORTS MED. 516, 517-18 (2004).
Children also appear particularly susceptible to repeated sub-concussive blows to the head that occur over the span of one or more seasons.\textsuperscript{86} “[S]econd-impact syndrome, a rapid and often fatal condition associated with a second head injury while the person is still symptomatic from a first, has been described mainly in adolescent athletes.”\textsuperscript{87} Because concussed children seem to require longer recovery periods than concussed adults, continued hits can produce devastating consequences even if none by itself would cause injury.\textsuperscript{88}

Some voices have suggested that greater public awareness of particularly high concussion rates in contact and collision youth sports may jeopardize the ability of leagues and high school programs to maintain insurance at rates affordable to many families who would participate.\textsuperscript{89} Other voices speculate that heightened danger of traumatic brain injury may cause more and more

\textsuperscript{88} See, e.g., Malcolm Gladwell, supra note 63 (quoting Dr. Robert Cantu); Alice Park, \textit{Kids’ Concussion Symptoms May Persist for a Year}, TIME, Mar. 6, 2012.

AND CAS. 360 (Apr. 23, 2012) (“While serious coverage implications due to concussions have yet to emerge, insurers, coaches and league officials are looking at prevention, testing and return-to-play guidelines”); \textit{Suicide Sends Loud Message}, supra note 56, at 63 (“it’s reasonable to ask what entity will insure a sport such as football someday”).
manufacturers of protective equipment to turn away from the prospect of impending legal liability. The San Jose (Calif.) Mercury News anticipates an even wider net: “[J]unior high and high school principals, athletic directors and coaches are soon going to have to start worrying about their liability” unless they take meaningful preventive measures in the face of known dangers.

Perhaps even more ominous for the futures of some youth collision and contact sports, however, the specter of concussions may depress enrollment by leaving some parents reluctant to enroll their children to play in the first place. Emile Therien, former president of the Canada Safety Council, spoke recently about safety-based rules changes that USA Hockey has made over the past few decades. His son Chris played twelve years in the National Hockey League, but the elder Therien says that, “If we hadn’t made changes to the equipment back then, . . . the

If you are coaching a high school football team, or refereeing a game as a volunteer, it is sobering to think that you could be hit with a $2 million lawsuit at any point in time.”).

92 See, e.g., Eric Sondheimer, Sports Doctor Answers: “Would I Let My Son Play Football?,” L.A. TIMES (Varsity Times Insider), July 1, 2012 (quoting Andrew Blecher, M.D., who would give his son a “qualified yes,” but would hope that he would not play particularly dangerous positions); see also, e.g., Jonathan Anker, Why My Son Will Never Play Football, http://www.hlntv.com/article/2012/05/04/why-i-will-not-let-my-son-play-football (May 22, 2012) (“[T]here are other sports out there. The world needs teachers and doctors. It does not need football players.”) (emphasis in original).
game wouldn’t exist today. Parents just wouldn’t enroll their kids. It would be child abuse.”

Because parents ultimately decide with their children what level of risk remains tolerable, parental reluctance amid the well-publicized concussion crisis may help explain recent national declines in the numbers of youngsters who play youth league and high school football. Columnist George F. Will speculates that “in this age of bubble-wrapped children, when parents put helmets on wee tricycle riders, many children are going to be steered away from youth football, diverting the flow of talent to the benefit of other sports.”

Emerging parental reluctance actually extends well beyond the bubble-wrap set. Even some professional football players – elite athletes who owe their families’ lifestyles to lucrative contracts -- have stated publicly that they do not want their own sons to play the sport under present rules, or that they would hesitate to permit them to play. Former quarterback and two-time NFL Most Valuable Player Kurt Warner, for example, openly discusses his “fear of placing any of my kids in an environment where brain trauma is a possible by-product of the competition.”

94 Mike Kaszuba, *End of the Innocence*, STAR TRIBUNE (Minneapolis, Minn.), Aug. 5, 2012, at 3C (discussing falling youth football enrollments in five Minneapolis-area communities); Bob Holmes, *Fewer Played Football in 2011*, BOSTON GLOBE, June 5, 2012, at C7 (“For the fifth straight year, participation in football across the state has dropped.”).

95 George F. Will, supra note 61 (emphasis in original).

Former Pittsburgh Steelers Hall of Fame quarterback Terry Bradshaw, who still suffers headaches from the hits he absorbed during his 14-year NFL career, is unequivocal: “If I had a son today, I would not let him play football.” After ten NFL seasons, New York Jets linebacker Bart Scott says that “I don’t want my [7-year-old] son to play football. I play football so he won’t have to. . . . I don’t want to have him deal with getting a concussion and what it would be like later in life.”

Derek Brown, who played eight seasons in the NFL, says that “a lot of guys in the [NFL] feel the same way” about exposing their children to the risk of concussions.

Neurosurgeons report that some parents still push their children to return too soon after a concussion, but Kurt Warner expresses the attitude of parents who refuse to dismiss the prospect of brain injury as “part of the game”: “We fall

I choose to risk my health to financially provide for my family. . . . However, our children’s developing brain is far more sensitive to chemical and metabolic changes of concussion.”).
short as guardians if we don’t try to reduce traumatic injuries such as concussions, especially with the information we now have.”  

B. Meeting the Youth Sports Concussion Crisis

Millions of children play organized sports each year, a number much larger than the number of collegians who played football when Theodore Roosevelt intervened in 1905. With these imposing numbers, injury prevention today does not depend on White House summits or other intercession by the President or any other national political leader (though the President’s Council on Physical Fitness and Sports partners with the U.S. Centers for Disease Control and Prevention to promote “Heads Up: Concussions in Youth Sports,” the Centers’ educational campaign for coaches, parents and athletes).

Injury prevention in youth sports depends instead largely on parents, medical professionals, legislators, journalists and other voices who spur national youth sports governing bodies and state high school activities associations toward ongoing rule changes in the name of greater safety. Concerned about the prospects of diminishing enrollments and perhaps difficulties maintaining insurance, governing bodies seem to be listening.

For example, neurosurgeon Julian Bailes, chair of Pop Warner football’s Medical Advisory Board, says that the organization’s recently announced rules

---

102 Kurt Warner, supra note 96.
103 See supra notes 45-46 and accompanying text.
changes, discussed below, “can eliminate 60-plus percent of the brain impacts or concussions.”105 “We're not trying to fundamentally change the game,” he explained, “We're trying to ensure its survival by reducing the potential for injury in practice. . . . For the future of the sport, we need to morph it now and take the unnecessary head contact out of the game. If parents were considering allowing their child to play football, [the new rules changes] should assure them.”106

1. Ongoing review of national playing rules

Two recent actions suggest the influence of parents and other advocates for greater safety in youth sports. As part of their continuing efforts to enhance player safety, Pop Warner Football and USA Hockey have adopted rules changes that retain the essential character of their respective sports, but postpone or reduce contact or collision until age levels when medical experts conclude that players are more developmentally ready.

a. Pop Warner football

A 2012 Virginia Tech study, which gathered data from sensors placed inside helmets, showed that some head hits suffered by seven- and eight-year-old football players resemble the harder hits taken by college football players.107 The

105 Te-Nehisi Coates, Youth Football Starts to Change, THE ATLANTIC, June 14, 2012 (quoting Dr. Bailes).
cumulative effects of sub-concussive hits can also exact a toll even though none by itself rises to the level of a concussion.\textsuperscript{108}

Reflecting “a new focus on brain injuries in [the] youngest players,”\textsuperscript{109} Pop Warner instituted new national rules changes recommended by its medical advisory board in 2012. The organization, which enrolls players between the ages of five and fifteen,\textsuperscript{110} now limits body contact to a third of a practice session (or a maximum of 40 minutes), and prohibits full speed head-on blocking or tackling drills where players line up more than three yards from each other.\textsuperscript{111}

ESPN’s Tom Farrey reports that with these rules changes, Pop Warner “challenges the longtime culture of America’s most popular game” by becoming “the first nationwide league at any level of football to restrict the amount of contact players experience.”\textsuperscript{112} The Bergen (N.J.) Record also reports that even before the national organization acted, some local youth football associations had already instituted safety measures of their own.\textsuperscript{113}

Pop Warner’s executive director says confidently that “[f]ootball is very capable of evolving and changing appropriately. If new research comes out, we will

\end{footnotes}
continue to change our rules to keep our kids as safe as we can.”

Controversy remains, however, because American Youth Football says that Pop Warner has gone “overboard,” and argues that health risks to young players can be better managed through proper coaching, sportsmanship and refereeing.

b. USA Hockey

Several years ago, USA Hockey banned body checking in the mite and squirt age levels, which enroll players under the age of eleven. In June of 2011, the organization extended the ban to the pee wees (ages 11-12), and thus postponed checking until the bantams (ages 13-14). The organization’s Progressive Checking Skill Development Program tightens standards of play for intimidation checks beginning in the bantams. The bans affect only boys’ hockey because checking is already banned in girls’ hockey.

USA Hockey acted after most medical studies found that body checking dramatically increases risks of concussion and other serious injury in particularly young hockey players. The Journal of the American Medical Association, for

115 Id.
118 See, e.g., Roman Augustoviz, Checking Ban Has Governing Bodies at Odds, STAR TRIBUNE (Minneapolis, Minn.), June 8, 2021, at 1C.
example, published a 2010 University of Calgary study which found that body checking at the pee wee level tripled concussion rates.  

Dr. Robert Cantu and Mark Hyman are right that “[y]outh hockey is a safer sport for the checking restrictions – that’s beyond dispute.” USA Hockey’s decision to postpone checking is actually the latest step in a march toward greater player safety that began decades ago. Much of what passed for protective equipment when I first laced on skates nearly in the mid-1960s (including soft leather helmets that left the ears and much of the head exposed) would appear laughable today to anyone who peruses family snapshots in an old scrapbook. Concussions and other head injuries must have been common, if often undiagnosed or ignored or misunderstood, in those days.

After some initial resistance to periodic rules changes that appeared odd or unusual, parents and coaches and players adapted each time. They seem also to have adapted to the latest postponement of body checking. “I have 11- and 12-year-old boys,” concludes parent, Hockey Night in Canada analyst, and former NHL star Mike Milbury, who was known for his physical play during his career. “At that

119 Carolyn A. Emery, Risk of Injury Associated with Body Checking Among Youth Ice Hockey Players, 303 J. AM. MED. ASS’N 2265 (June 9, 2010); see also, e.g., Roman Augustoviz, supra note 118 (quoting Dr. Michael Stuart, USA Hockey chief medical officer and Mayo Clinic Sports Medicine Center co-director; “numerous studies document significant risks of injuries, including concussions, in leagues that allow body checking at the peewee level”).

120 Robert Cantu & Mark Hyman, supra note 25, at 22.

age, their heads and necks are not developed. They’re more susceptible to concussions and the after-effects. . . . They should take hitting out until kids are in bantam.”

2. Implementation of playing rules: “All safety is local”

Thomas P. (Tip) O’Neill, former Speaker of the U.S. House of Representatives, famously said that “all politics is local.” Decisionmaking in Washington surely influences voters, but the Speaker recognized that local happenings can influence voters even more by affecting their daily lives most directly. O’Neill’s explanation holds relevance in youth sports, where ultimately “all safety is local” because protocols and playing rules are enforced (or not enforced) in practice sessions and games in towns and cities largely beyond the direct day-to-day supervision of national and state governing bodies.

“The life of the law,” explained former Harvard Law School Dean Roscoe Pound, “is in its enforcement.” Pound meant that achieving a statute’s protective purpose depends on responsible enforcement because words on paper, by themselves, protect no one and statutes do not apply themselves. A youth sport’s playing rules – the “statutes of the game” -- similarly are merely words on paper, and they achieve their protective purpose only with responsible local enforcement by coaches, league administrators, game officials and parents.

Youth sports playing rules can lose much of their protective force when

---

123 Id.
125 Roscoe Pound, Mechanical Jurisprudence, 8 COLUM. L. REV. 605, 619 (1908).
adults intimidate referees, skirt the rules, or incite the players in the heat of local games. For nearly fifteen years, sports safety advocates have been haunted by an overheated Chicago-area youth hockey game in which these three manifestations of local irresponsibility led to a 15-year-old player’s catastrophic injury. The player suffered quadriplegia and not a concussion, but the story provides harsh lessons about the tenuous role of safety-based playing rules in youth sports generally.

On the night of November 3, 1999, New Trier High School’s junior varsity hockey team faced off against bitter rival Glenbrook North High School in the Chicago suburb of Gurnee. With only a few seconds remaining in the game, New Trier led, 7-4, in the teams’ first meeting since Glenbrook North had edged them, 3-2, for the Illinois state junior varsity title a season earlier.126

The November rematch was out of control from the opening faceoff. “[V]iolence flared repeatedly as the mood grew ugly,”127 and eyewitnesses later described “an intense battle”128 as each team’s parents and students taunted rival fans and players.129 The players trash talked one another and squared off in confrontations unrestrained by their coaches,130 the leaders recognized by pediatric professionals as “the most important individual[s] for maintaining safety” in youth

---

128 Debbie Howlett, Teen May Face Trial In Sports Injury, USA TODAY, May 5, 2000, at 3A.
129 Assoc. Press, supra note 127; see also, e.g., Bryan Smith, supra note 126.
The referees called sixteen penalties, an especially high number for a junior varsity hockey game.

At the final buzzer or within a second or two afterwards, a 15-year-old Glenbrook North player sped across the ice, blind-sided New Trier sophomore co-captain Neil Goss, and body checked him head-first into the boards. “That’s what you get for messing,” the player said as Goss lay prone on the ice, permanently paralyzed from the neck down.

USA Hockey’s national playing rules did not fail Neal Goss. He wore a helmet, face cage and other protective equipment that met safety specifications. No report indicated that any coach or referee had evaded or failed USA Hockey’s nationally-mandated criminal or child abuse background checks, or lacked the classroom training required of coaches and officials. The Glenbrook North attacker received a penalty for cross-checking and a 30-day suspension pending a hearing before state amateur hockey officials.

---

132 Tony Gordon, Plea Deal Ends Emotional Hockey Case, CHI. DAILY HERALD, Aug. 8, 2000, at 1; Debbie Howlett, supra note 128, at 3A.
134 See Megan O’Matz, supra note 133 (discussing the Goss family’s lawsuit, which did not name USA Hockey as a defendant).
Players on both teams were left vulnerable instead by rabid adults who let their emotions get the better of them. As the game spiraled out of control for an hour or more, no coach, referee, league administrator or parent had the common sense to stop the game, deliver a public address announcement requesting respect for the rules, or otherwise move the teams from the brink before it was too late.

We cannot prove that adult irresponsibility caused the cheap shot that left Neal Goss a quadriplegic, but adults concerned about player safety do not need any such proof. Parents seek to protect their children every day based not on demonstrable proof, but on the parents’ own intuition and common sense.

Intuition and common sense suggest that particularly in contact and collision sports, adults heighten the risk of concussion or other avoidable injury when they tolerate or encourage dirty play and other violence outside the rules of the game. Adult irresponsibility may not make serious injury inevitable, but adult irresponsibility creates a toxic local atmosphere that can make serious injury much more likely.

Nearly 15 years after the Chicago junior varsity hockey tragedy, too many parents and coaches continue moving in the wrong direction. In 2010, Reuters News and the market research company Ipsos jointly conducted a survey in twenty-two nations. The survey ranked parents in the United States as the world’s “worst behaved” parents at children’s sports events.136 Sixty percent of U.S. adults who

had attended youth sports contests reported that had seen parents become verbally or physically abusive toward coaches or officials; runners-up were parents in India (59%), Italy (55%), Argentina (54%), Canada (53%) and Australia (50%).

“It's ironic that the United States, which prides itself in being the most civilized country in the world, has the largest group of adults having witnessed abusive behavior at children's sporting events,” said an Ipsos senior vice president.

The Reuters/Ipsos survey confirmed earlier surveys that uniformly found significant rates of adult violence, vulgarity and abuse at children’s games in the United States. Observers report “innumerable cases . . . throughout the country every month . . . of games turning tragic at the hands of enraged parents.”

“Waves of head-butting, elbowing and fighting have been reported at youth sporting events across the country.”

These reports and the consistent survey numbers suggest that when ill-tempered adults tolerate or incite local rules violations, the adults risk neutralizing national safety standards that seek to protect youth leaguers from concussions and other preventable injury. Dr. Michael Stuart, professor of orthopedic surgery at the
Mayo Clinic and USA Hockey’s chief medical officer, helped design the organization’s recent ban on pee wee body checking, but he recognizes that rules changes are not enough: “The hardest thing of all is trying to instill sportsmanship and mutual respect.”

On the first anniversary of the fateful New Trier-Glenbrook North junior varsity game, a veteran local referee said that “nothing” had changed in Chicago-area high school hockey. “It’s just as bad as it ever was,” he concluded. “There’s kids being carried off the ice every night. You have parents acting like animals in the stands, coaches acting like animals on the bench . . . . But when their kid gets hurt, they can’t figure out why.”

a. Medical research

The link among adult irresponsibility, local rules breakdowns, and increased risk of concussions and other serious sports-related injuries finds support in medical research. Researchers have even intimated that the United States should perceive “foul play” in youth sports as a “public health concern” for the risk of serious injuries that persistent rules violations pose in games played by millions of children each year.

A recent study by the Center for Injury Research and Policy at Nationwide

---

142 Lisa Kocian, Checking Head Injuries in Winter Sports, BOSTON GLOBE, May 24, 2012 (quoting Dr. Stuart).
143 Barry Rozner, One Year After a Hockey Tragedy, What Has Changed?, CHI. DAILY HERALD, Nov, 3, 2000, at 1.
144 Id.
Children’s Hospital, one of the nation’s most comprehensive pediatric research institutes, demonstrates not only how clean play enhances player safety, but also how dirty play enhances preventable risk. The study concerned nine high school sports (boys’ football, soccer, basketball, wrestling and baseball; and girls’ soccer, volleyball, basketball and softball).

The Children’s Hospital researchers estimated that between 2005 and 2007, more than 98,000 injuries in these nine sports were directly related to an act that a referee or disciplinary committee ruled illegal. In four of the nine sports studied, illegal acts were responsible for more than 10% of injuries: boys’ soccer (11.4%), girls’ soccer (11.9%), boys’ basketball (10.3%), and girls’ basketball (14.0%). Thirty-two percent of these injuries were to the head or face, and 25% were concussions.

The Children’s Hospital study was unequivocal: “Reducing the number of injuries attributable to illegal activity in general among US high school athletes can specifically reduce the number of injuries to the head/face and concussions.”

To spur injury reduction, the Children’s Hospital researchers urged better local rules enforcement through “targeted education about the dangers of illegal

148 Id. at 34.
149 Id. at 36.
150 Id.
151 Id.
activity/foul play for players, coaches and referees.”

“Each sport has . . . rules developed to promote fair competition and protect participants from injury,” the researchers explained. “[E]nforcing rules and punishing illegal activity is a risk control measure that may reduce injury rates by modifying players’ behavior.”

b. Abuse of game officials

The American Academy of Pediatrics reports agreement among sports medicine professionals that “[o]fficials controlling the physicality of the game . . . can . . . play significant roles in reducing contact injuries.” Another recent medical study concurs that “[t]o be effective for promoting safety,” a youth sport’s rules “must be enforced rigorously and consistently by referees and leagues.”

In many communities, however, parents and coaches thwart rigorous, consistent rules enforcement by directly or indirectly creating a chronic shortage of referees and other game officials. A primary reason for the chronic shortage is the steady exodus of experienced officials who grow disgusted with the verbal, and sometimes physical, abuse inflicted on them from adults on the benches and in the stands. Efforts to recruit replacement officials may not keep pace with attrition

157 Robert Cantu & Mark Hyman, supra note 25, at 153.
because, according to the Deseret (Utah) Morning News, “[b]rand-new officials often suffer through their first season of abuse before deciding that refereeing just isn’t worth it.”158

“Officiating a youth sports game is becoming an increasingly risky job,” explains Positive Coaching Alliance executive director Jim Thompson, who says that “[y]outh Sports officials are under attack – literally.”159 The risk has increased so much that the National Association of Sports Officials offers youth sports officials insurance for “injuries suffered when an official is the victim of an assault and/or battery by a spectator, fan or participant.”160

Particularly in contact or collision youth sports at older age levels, player safety suffers when so many veteran officials hang up their whistles each year. Many replacement officials are inexperienced, unprepared for responsibilities thrust on them, and frequently unable to keep up with fast-paced games. But for the veteran officials’ departures, many replacements would not be on the field.

III. THE LAW’S ROLE IN YOUTH SPORTS SAFETY

A. Recent State Concussion Legislation

Between 2009 and July 2012, at least 34 states have enacted statutes concerning traumatic brain injury. In 2012, at least 14 states have introduced some

type of traumatic brain injury legislation.\textsuperscript{161} By targeting concussions in youth sports in such unison,\textsuperscript{162} this flurry of nationwide legislative activity demonstrates the persuasive force of emerging medical research and commentary, and of the responses and expectations of parents and sports safety advocates.

Nearly all the new statutes require that before each season, state education departments or local boards of education provide parents, coaches, administrators and players with information and education about the nature and dangers of concussions, how to recognize symptoms of potential brain trauma, and how to help insure healthy recovery.\textsuperscript{163} Some of the statutes contemplate provision of written materials, and others also specify face-to-face group presentations.\textsuperscript{164}

Most of the new statutes also require that coaches immediately remove from a practice session or game any player who is suspected to have suffered a concussion.\textsuperscript{165} Most also specify that the player may not return to action until a physician or other licensed medical professional clears the player and affirms that return is medically appropriate.\textsuperscript{166}

\textsuperscript{162} \textit{Id.} (presenting state-by-state summary).

\textsuperscript{164} \textit{See, e.g.}, Conn. Acts, P.S. 1062 (Reg. Sess.) (coaches must complete annual training and review, and complete refresher courses once every five years); 2011 Ind. Acts, P.L. 144 (Dep’t of Educ. must develop and disseminate guidelines, information sheets and forms).

\textsuperscript{165} \textit{See, e.g.}, Nat’l Conf. of State Legis., \textit{supra} note 161 (presenting state-by-state summary).

\textsuperscript{166} \textit{Id.}
The new concussion statutes take giant steps in the right direction, but they do not displace safety-based review and enforcement of playing rules. The statutes merely establish prudent protocols for preventing and reacting to actual and suspected concussions that players suffer in practice sessions and games that are conducted in accordance with the rules.

Nor do the statutes’ protocols appear to protect all young athletes who need the law’s protection. Many of the statutes, for example, do not appear to reach private youth sports associations, even ones that enroll millions of children and use public fields and other facilities under permits or licenses granted by local government bodies. The legislature surely “may take one step at a time, addressing itself to the phase of the problem which seems most acute to the legislative mind,” but child safety advises extending the statutory mandates to these associations. Government agencies have long held discretionary authority to regulate private use of public property that charters, statutes or ordinances commit to agency management.

The new statutes’ implementation remain challenging because most coaches and game officials are not medical professionals, may lack first-aid training, and typically must make initial on-the-spot decisions without immediate medical

Less than half of high schools have certified athletic trainers on staff, and many high schools do not enlist local volunteer physicians to play formal roles at practices and games. In community youth leagues, certified trainers are rare indeed.

Youth sports programs should perceive the new statutes as invitations to take proactive measures not explicitly mandated in the legislation, including the hiring of certified trainers. In the absence of certified trainers, youth leagues and high school teams alike should enlist medically-trained volunteers to serve on the staff at practices and games with authority to overrule the coaches’ decision not to remove the apparently injured player from the lineup. When I was president, our youth hockey program had a medical committee of parents who were physicians, nurses or emergency medical technicians. At least one such volunteer was assigned

to each practice and game, frequently when their own children were playing so that the volunteer would be on the premises anyway.

The youth hockey program instructed coaches to err on the side of caution when a player takes a hit and comes to the bench disoriented. “You can play with a big bruise or hip flexor,” but “[t]here is never a scenario in which playing with a head or spinal injury, or a suspicion of such an injury, should be condoned.”174 The hockey program’s bywords were, “When in doubt, sit the player out.” Feelings of disorientation can be “after-shocks of brain trauma”175 and, as the National Institutes of Health recognizes, children “have many decades of life ahead.”176

B. Litigation

The law’s prescriptions frequently help shape personal behavior, but we should not exaggerate the current role of tort litigation in preventing concussions and other avoidable youth sports injuries. The specter of lawsuits by injured players might influence and indeed accelerate safety initiatives by stimulating the sensibilities of rulemakers and other concerned adults, by jeopardizing the availability of insurance at favorable rates, or by leaving individual parents reluctant to enroll their children. Any such potential longer-term influence on prevention efforts, however, has only residual effect on a player injured today.

Regardless of whether lax rules enforcement may have contributed to the underlying injury, a negligence suit against governing bodies, leagues or coaches can only compensate a youth leaguer for injuries that have already occurred. A

third or more of the recovery after settlement or trial may go to the plaintiff’s lawyer under the contingent-fee retainers common in personal injury suits.\textsuperscript{177} Compensation can react to damage (and surely is no small matter to a family facing medical expenses), but compensation does nothing to reverse the injury’s immediate and sometimes permanent consequences to the player.

With the sufficiency of USA Hockey’s national safety standards not in issue,\textsuperscript{178} tort law reacted to Chicago-area hockey player’s Neal Goss’ quadriplegia as best it could. Facing lifetime costs for medical and around-the-clock personal care, the Goss family filed a multimillion-dollar civil damage action alleging that five defendants negligently failed to maintain control during the game – the Glenbrook North opponent; the Glenbrook North coach; the Illinois Hockey Officials Association; the Northbrook Hockey League, which sponsored the Glenbrook North team; and the Amateur Hockey Association of Illinois.\textsuperscript{179} The parties reached private settlements in some of the civil suits and USA Hockey’s insurance helped meet the bedridden Neal Goss’ expenses for lifelong care.\textsuperscript{180}

IV. CONCLUSION

Discussion about the serious consequences of sports-related concussions “can no longer really be called a debate,” because seriousness has become “a widely

accepted fact.” Former Montreal Canadiens hockey goaltender Ken Dryden writes that “[h]ead injuries have become an overwhelming fact of life in sports” because of “[t]he immensity of the number, the prominence of the names, the life-altering impact on their lives, and, more disturbingly, the sheer routineness of their occurrence.” Evidently from swelling youth sports enrollments and greater willingness to report traumatic brain injury, reported concussions in high school sports have been rising at a 15% annual rate. Experts predict even higher pediatric sports-related concussion rates in the foreseeable future.

“[T]he concussion problem in football and other contact sports is far more serious than any of us want to believe, and it is time to do something about it,” says former football player, professional wrestler and Minnesota Governor Jesse Ventura. Two researchers report that, “[e]ven 10 years ago, a young athlete with a ‘ding’ or low-grade concussion would have been allowed to return to sports as soon as 15 minutes after his or her symptoms had cleared.” Former Tampa Bay

Buccaneers president Gay Culverhouse reports that as late as 2006, rushing a player back from a concussion was “standard operating procedure in the NFL. Concussions were not taken seriously. . . . This was the culture of the time. Your teammates expected you to play, and your coaches expected you on the field on game day.”

Today, however, more and more adults and children are coming to respect concussions for what they are – traumatic brain injuries that can leave their young victims less able to learn in school, perform other functions of everyday life, and perhaps enjoy adulthood free from chronic pain, cognitive dysfunction and possible mental deterioration.

“Unlike other anatomical areas such as our bones, muscles, ligaments, and tendons, our brain tissue has relatively little ability to heal and repair itself.”

“While today many parts of the body can be replaced either by artificial hardware or transplantation, the brain cannot be replaced.” With the stakes so high, says CNN chief medical correspondent, neurosurgeon Sanjay Gupta, “we owe it to our . . .

kids . . . to make them as safe as we know how to do, and we can do a lot better than we have been doing.”192

The primary focus belongs on prevention, which begins with parents, medical professionals, journalists and legislators who influence national youth sports governing bodies and state high school activities associations to continue evaluating playing rules to maintain the essence of particular sports while also making play as safe as possible.193 Proposals for further safety-based rules changes warrant careful attention.194 Reacting favorably to Pop Warner’s recent changes, for example, the Boston Globe urged the organization to “consider further limits, including those that affect games, not just practices. Wisely, the organization hasn’t ruled out a ban on the three-point stance, which puts linemen in the position of starting plays with heads out front.”195

Prominent neurosurgeon Robert Cantu would go even further. He recommends postponement of tackling in football, body checking in hockey and heading the ball in soccer until players have turned fourteen.196 Other voices support Dr. Cantu’s well-articulated position.197

“Consistent and diligent enforcement of the rules and regulations of the game,” says Dr. William P. Meehan, “may be one of the most effective ways of reducing the risk of sport-related concussions.” Ultimate responsibility for enforcement resides at the local level with coaches, league administrators, game officials and parents, even ones whose children play clean and cause no trouble. The player lying prone on the ice at the end of the 1999 Chicago junior varsity hockey game could have been any parent’s child. Neal Goss happened to be in the wrong place at the wrong time, the victim of impulsive violence outside the rules of the game. If the adults had maintained their self-control from the start, he would likely have walked out of the rink because players trained and supervised by responsible adults do not race several yards to drive opponents’ faces into the ground at the end of a game.

As our nation confronts an epidemic of pediatric obesity, we serve children best when we encourage participation in sports by reassuring them and their families that games can be played vigorously yet safely. As the law continues responding to the youth sports concussion crisis, the response does not displace need for ongoing review and responsible enforcement of playing rules. The recent preventive rules changes made by USA Hockey and Pop Warner football playing days, who says that youngsters should not play tackle football before high school because their bodies are not ready).

demonstrate how medical research and advocacy for greater safety can prevail over charges that rules changes seek to “wussify” collision and contact sports. Speaking in support of Pop Warner’s rules changes, University of Alabama football coach Nick Saban explained that “Anytime you change something, people will say no, they've done it this way for a long time. But there’s always a better way.”200

Two years after his 1905 White House intercollegiate football summit, President Theodore Roosevelt addressed youth sports in a message to the Washington Playground Association:

City streets are unsatisfactory playgrounds for children because of the danger, because most good games are against the law, because they are too hot in summer, and because in crowded sections of the city they are apt to be schools of crime. Neither do small back yards nor ornamental grass plots meet the needs of any but the very small children. Older children who would play vigorous games must have places especially set aside for them; and, since play is a fundamental need, playgrounds should be provided for every child as much as schools. This means that they must be distributed over the cities in such a way as to be within walking distance of every boy and girl, as most children can not afford to pay carfare.201

The face of youth sports has changed dramatically since Roosevelt’s time. Until a few decades ago, American children generally conducted their own games on

local playgrounds or sandlots without adult involvement.\textsuperscript{202} Today most youth sports is conducted by adults in private associations, public agencies such as parks and recreation departments, and high school activities associations.\textsuperscript{203} Roosevelt’s message to the Washington Playground Association suggests that he would applaud efforts to provide children the safe competition and personal growth that remain the promises of youth sports.
